(54) Title: PROTECTIVE CONTAINER FOR RAZOR

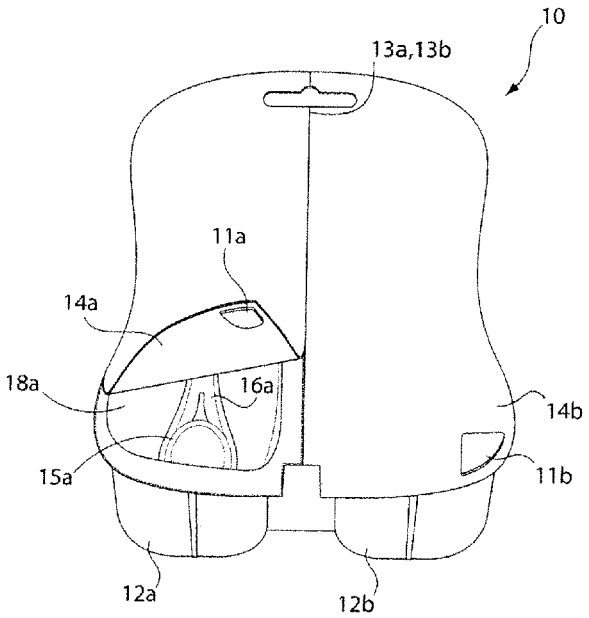

Fig. 1A

(57) Abstract: A novel razor package (10) suitable for protectively storing a razor with a cartridge and adjoining handle is disclosed. The package includes at least one container (12a, 12b) with upper and lower portions. The upper portion includes a cartridge-receiving recess (26a) and the lower portion includes a handle-receiving recess (27a). A cover sheet (14a, 14b) covers the top perimeter of the container and is sealed to the container such that a user can peel the sheet back to open and access the razor. With two or more containers in the razor package the cover sheets may have a sheet separability line (13a) between them to allow for easy peeling. Additionally, these containers (12a, 12b) may be secured together via a container separability line (13b), allowing a user to also pull off one container from the package at a time. The container and sheet separability lines (13a, 13b) may be aligned and may or may not be formed at the same time.
