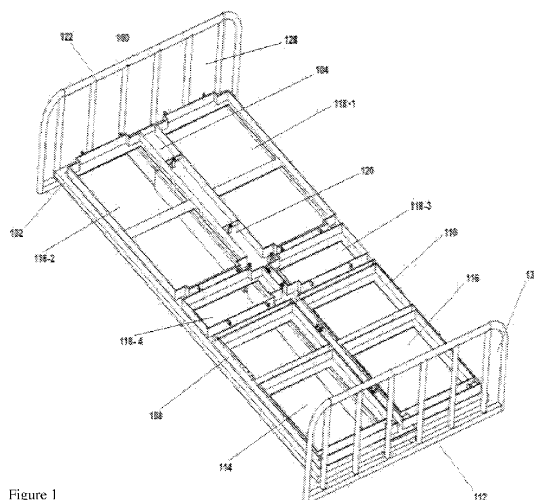

Figure 1

(57) Abstract: A modular bed (100) comprising a main frame (102), a midline spine (104), a first subframe (108) and a second subframe (110) mounted within the main frame (102), a first pair of flaps (114) and a second pair of flaps (116) mounted within the second subframe (110), and a set of flaps (118) is disclosed. The first subframe (108) and the second subframe (110) are mounted on either side of the midline spine (104) and are configured to move laterally. Further, the first pair of flaps (114) and the second pair of flaps (116) are capable of sliding along the longitudinal central axis (106). Further, the set of flaps (118) are within the main frame (102) coupled to either side of the midline spine (104) through a hinge (120) and capable of an individual lateral movement.
