(54) **Title:** POLICY RISK POSITIONING METHOD AND APPARATUS, ELECTRONIC DEVICE, AND STORAGE MEDIUM

(54) **发明名称**: 策略风险定位方法、装置、电子设备及存储介质

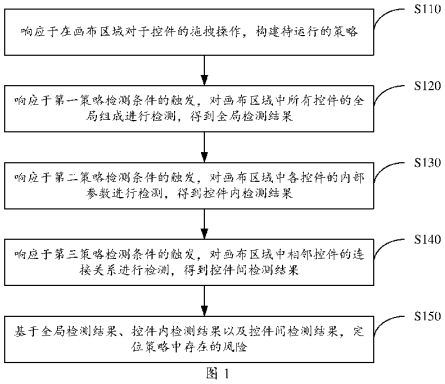

图 1

S110 In response to a drag and drop operation for controls in a canvas region, construct a policy to be operated

S120 In response to triggering of a first policy detection condition, detect global compositions of all the controls in the canvas region to obtain a global detection result

S130 In response to triggering of a second policy detection condition, detect internal parameters of the controls in the canvas region to obtain an intra-control detection result

S140 In response to triggering of a third policy detection condition, detect a connection relationship between adjacent controls in the canvas region to obtain an inter-control detection result

S150 On the basis of the global detection result, the intra-control detection result, and the inter-control detection result, position a risk existing in said policy

(57) **Abstract:** Provided are a policy risk positioning method and apparatus, an electronic device, and a storage medium. The method comprises: in response to a drag and drop operation for controls in a canvas region, constructing a policy to be operated; in response to triggering of a first policy detection condition, detecting global compositions of all the controls in the canvas region to obtain a global detection result; in response to triggering of a second policy detection condition, detecting internal parameters of the controls in the canvas region to obtain an intra-control detection result; in response to triggering of a third policy detection condition, detecting a connection relationship between adjacent controls in the canvas region to obtain an inter-control detection result; and on the basis of the global detection result, the intra-control detection result, and the inter-control detection result, positioning a risk existing in said policy.

(57) **摘要**: 提供了一种策略风险定位方法、装置、电子设备及存储介质，方法包括：响应于在画布区域对于控件的拖拽操作，构建待运行的策略；响应于第一策略检测条件的触发，对画布区域中所有控件的全局组成进行检测，得到全局检测结果；响应于第二策略检测条件的触发，对画布区域中各控件的内部参数进行检测，得到控件内检测结果；响应于第三策略检测条件的触发，对画布区域中相邻控件的连接关系进行检测，得到控件间检测结果；基于全局检测结果、控件内检测结果以及控件间检测结果，定位策略中存在的风险。
