CONNECTOR AND HOUSING THEREOF

ABSTRACT OF THE DISCLOSURE

A connector and the housing thereof, which is equipped with at least one light emitting element having at least one lead, are disclosed. The connector includes at least one connecting base, at least one light emitting element, and a housing. The housing covers at least a portion of the connecting base and has a body and at least one fastening structure. The light emitting element is accommodated in the body, and the fastening structure is connected with the body and fastens the lead of the light emitting element so as to connect and fix the light emitting element with the body.
