ABSTRACT

MULTI-WELL FILTER PLATE WITH SHIFTED WELLS AND U-BOTTOM RECEIVER PLATE

Multiwell filtration apparatus comprising a filter plate having a plurality of wells, each including a support. Each well has a corresponding adjacent access port providing access to the corresponding feeding/receiver plate well, e.g. via a pipette. When the filter plate is positioned over a feeding/receiver plate having a plurality of wells, each well of the feeding/receiver plate aligns with and communicates with a corresponding filter plate well. Each well in the feeding/receiver plate has a deepest portion relative to its respective filter plate well inlet.
