What is claimed is:

1. A protective grid with an adjustable size, comprising frames, characterized in that the frames are composed of horizontal frames (1) and vertical frames (3); the protective grid also comprises an adjusting device (2) which is used for connecting the horizontal frames (1) and the vertical frames (3), wherein the adjusting device (2) comprises a first mating block (25) and a sleeving block (26) used for sleeving the first mating block on the outer side; the protective grid also comprises screws via which the first mating block (25) and the sleeving block (26) are connected between the horizontal frames (1) and the vertical frames (3); the first mating block (25) comprises drawers (251) and two rectangular blocks (252) used for connecting two of the drawers (251) vertical to each other; and each one of the drawers (251) is formed with a third recess.

2. The protective grid with an adjustable size as claimed in Claim 1, characterized in that the end faces of the rectangular blocks (252) which are connected with the drawers (251) are provided with through holes.
