LARGE MODEL–BASED QUESTION-ANSWERING METHOD AND APPARATUS, COMPUTER SYSTEM, AND STORAGE MEDIUM

ABSTRACT

This specification provides a large model–based question-answering method and apparatus, a computer system, and a storage medium. The method includes: processing question information for a specified knowledge document based on a knowledge base pre-constructed based on the specified knowledge document, to obtain prompt information to be transmitted to a target large model, so that the target large model outputs answer information based on the prompt information; obtaining update data, determined based on the answer information, for the specified knowledge document; and updating the knowledge base based on the update data. This can ensure updating and optimization of the knowledge base without a need to train a large language model, thereby improving accuracy of question answering.
