ORDER PROCESSING METHOD, ELECTRONIC DEVICES, STORAGE MEDIUM, AND ORDER MANAGEMENT SYSTEM

说 明 书 摘 要

本说明书提供一种订单处理方法、电子设备、存储介质及订单管理系统。订单处理方法应用于目标商家的订单管理系统，订单管理系统包括至少一个POS设备和至少一个显示设备。其中，POS设备可以获得目标订单，并将目标订单分别发送给各个显示设备。各显示设备在接收到目标订单后，可以根据自身负责管理的商品类型，从目标订单中确定出需要由自身管理的目标商品集合，并基于当前的工作模式，在显示屏中对目标商品集合中的至少部分商品进行显示，以引导工作人员对显示的商品执行目标操作。其中，每个显示设备包括多种工作模式，不同工作模式实现对不同角色的工作人员的引导。

This specification provides an order processing method, an electronic device, a storage medium, and an order management system. The order processing method is applied to an order management system of a target merchant, and the order management system includes at least one POS device and at least one display device. The POS device can obtain a target order, and send the target order to each display device. After receiving the target order, each display device can determine, from the target order based on a product type that the display device is responsible for managing, a target product set that needs to be managed by the display device, and display at least some products in the target product set in a display based on a current operating mode, to instruct a worker to perform a target operation on the displayed product. Each display device includes a plurality of operating modes, and workers of different roles are instructed in different operating modes.
