TRIGGER ACTUATOR FOR A SWITCHING DEVICE

ABSTRACT

A switching device and a method for switching states of a switching device are provided, the switching device comprising a housing; a switching module comprising a switching element, the switching module is configured to switch a state of the switching element upon generation of a condition trigger signal based on one or more predetermined conditions; and an actuator for receiving a mechanical input and for facilitating generation of an electrical toggle signal to the switching module, the toggle signal for instructing the switching module to switch a state of the switching element.
