or 8, further comprising step 3) sterilization treatment.

[CLAIM 10]

The method for manufacturing a bioabsorbable cotton-like material according to any one of claims 7 to 9, wherein the biodegradable resin is PLGA or a copolymer thereof, and the solvent is chloroform or dichloromethane.

[CLAIM 11]

The manufacturing method according to any one of claims 7 to 10, wherein the drug is an anticancer agent.

[CLAIM 12]

A kit for use in a method of treating or preventing a disease in the patient, said method comprising:

1) implanting the bioabsorbable cotton-like material according to claim 6 in a body of a patient;

2) sustainably releasing the drug from the bioabsorbable cotton-like material; and

3) treating or preventing the disease in the patient by an effect of the sustainably released drug, said kit comprising the bioabsorbable cotton-like material according to claim 6.

[CLAIM 13]

The kit according to claim 12, wherein the bioabsorbable cotton-like material according to claim 6 is to be implanted by laparotomy.

[CLAIM 14]

The kit according to claim 12, further comprising an injector, wherein the bioabsorbable cotton-like material according to claim 6 is to be implanted by a minimally invasive medical procedure using the injector.

[CLAIM 15]

The kit according to claim 12, wherein the drug is an anticancer agent, and the disease is cancer.

[CLAIM 16]

The kit-according to claim 15, wherein the patient has been subjected to resection of cancer tissue or cancer cells.

[CLAIM 17]

The kit according to claim 15 or 16, wherein the cancer is malignant bone tumor.

[CLAIM 18]

The kit according to claim 14, wherein the bioabsorbable cotton-like material according to claim 6 is contained in the injector.
