ABSTRACT

An object of the present invention is to provide a beverage in which a gel-like material can be stably suspended and exists in such a state that the gel-like material is not visible in the beverage. Specifically disclosed is a beverage that contains a gel-like material and a liquid fraction. The beverage is prepared using gellan gum as a gelling agent to prepare the gel-like material, adding gellan gum also to the liquid fraction, and adjusting the Brix value of the gel-like material to a value equal to or lower than the Brix value of the liquid fraction.
