(54) **Title**: CONTROL OF WIRELESS TRANSMISSION BASED ON NODE STATUS

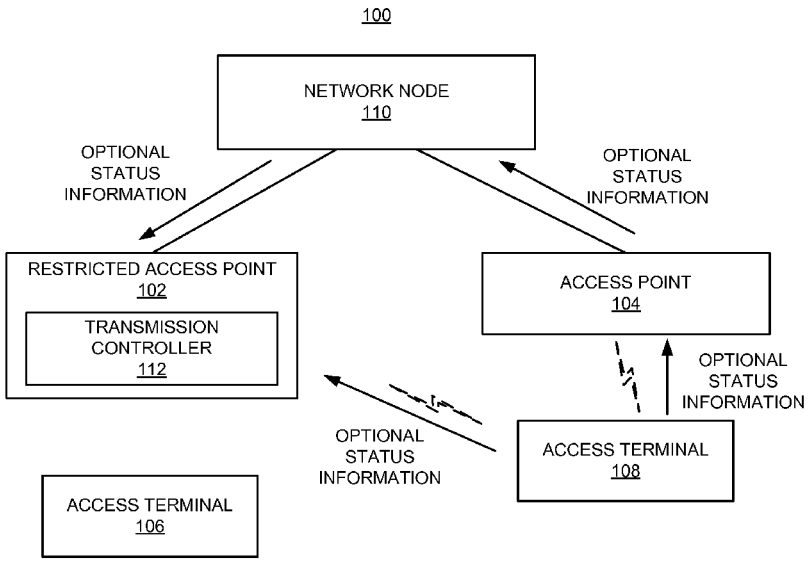

FIG. 1

(57) **Abstract**: Transmission by a first node (102) may be controlled based on a status of a second node (108). The status of the second node (108) may indicate, for example, whether the second node (108) will be communicating with the first node (102). Thus, if it is determined based on the status of the second node (108) that the second node (108) may not be communicating with the first node(102), transmissions by the first node(102) may be temporarily disabled until there is a change in status, and vice versa.
