HIG2 AND URLC10 EPITOPE PEPTIDE AND VACCINES CONTAINING THE SAME

Abstract

The present invention provides a pharmaceutical agent or composition containing one or more peptides having the amino acid sequence of SEQ ID NO: 1 or 2, or one or more polynucleotides encoding such a peptide formulated for the treatment and/or prevention of cancer in a subject whose HLA-A antigen is HLA-A0206. Furthermore, the present invention provides a method of inducing CTL and antigen-presenting cells using such peptides, polynucleotides or pharmaceutical agents.
