(54) Title: MARKER AND METHOD FOR CANCER DIAGNOSIS

(57) Abstract: The present invention relates to a diagnostic cancer marker using variation of a granulocyte colony stimulating factor (G-CSF) gene and a method for preparing the same, and more specifically, relates to a method for diagnosing cancer and/or assessing the state of cancer progression using an oligonucleotide having the 3'-terminal end of exon 2 region linked to the 5'-terminal end of exon 4 region of a G-CSF gene as a diagnostic cancer marker. According to the present invention, cancer can be quickly and exactly diagnosed using variation in a G-CSF gene expression.
