(54) Title: REMOTE CUSTOMISATION MODULE AND SYSTEM COMPRISING SAID MODULE

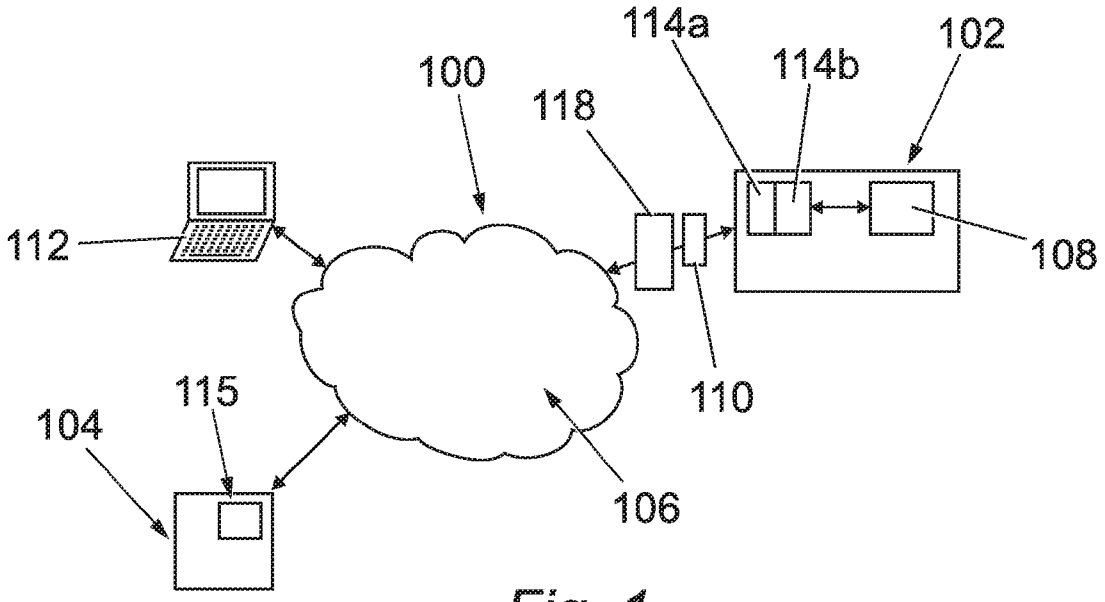

Fig. 1

(57) Abstract: A remote customisation module for a logic engine, running upon a server remote from said logic engine, comprises a communication interface arranged to communicate with the logic engine and with an application running upon said server. The module also comprises a logic element arranged to receive an incoming request for data from the logic engine via the communication interface. The logic element is arranged to interrogate the application in order to extract data required to fulfil said request. The logic element is also arranged to process said extracted data to generate response data and to pass said response data to the logic engine.
