Abstract

Protector for Card Shooter and Table Game System

While a card shooter is not being used, it may be possible to open a cover thereof and take out a card or insert a false card to commit a fraudulent act. The present invention aims to provide a protector for a card shooter capable of preventing the opening of the cover to take out a card or insert a false card for the purpose of cheating, as well as the fraudulent taking out of a card from a reverse U-shaped opening that is provided in a front portion of the card shooter.

A table game system (1) is configured by a card shooter (2) and a protector (3) to prevent any fraudulent act from being committed with respect to the card shooter (2). The card shooter (2) includes a main body (5) that includes a card housing unit (4) for housing cards, and a cover (6) for covering the card housing unit (4). A reverse U-shaped opening (8) for the taking out of cards (7) one by one from the card housing unit (4) is provided in a front portion of the main body (5). The protector (3) is attached to the card shooter (2) so as to cover a front portion thereof, and configured to be attachable/detachable with respect to the card shooter (2).
