

ANTI-BEDSORE MATTRESS**Abstract**

An anti-bedsore mattress comprises a mattress made of natural latex foam providing a
5 density of natural latex foam that does not cause a pressure to the patient body at any position for
more than 60 mmHg. The said anti-bedsore mattress divide the load-bearing parts into three parts
comprising a coccyx supporting part having a density of natural latex foam lower or equal to the
a top part and a bottom part. The total density of latex foam is between 65 to 90 kg/m³.
