ABSTRACT

I, Dhanasekaran Basker, naming this entire world's geographical changing, new historical Important invention as **“Basker's Underwater Rescue And Survival Kits (Basker's URASK)”** that originated in my lovely heart and invented by my thinking brain, after my childhood experiences (While I was not swimmer, but, wished and done to go deeper in water by using natural plant's straw for air supply) and adulthood experiences (Engineered world's largest SEA aquarium as-per Guinness world records). This is an air supplying system / mechanism in combination of proper tubing / piping / ducting with float, to human and / or land living animal(s) to rescue and survive underwater and / or deep wells. Various “Basker's Underwater Rescue And Survival Kits (Basker's URASK)'s details of Structural and Functional (Operational) features are explained in Description and shown in **Figure 1 (For Publication)** to 5.
