(54) Title: MANAGING DATA FEEDS

FIG. 1

(57) **Abstract:** Managing data units broadcast from a data feed (14), without re-transmission by a source of the data feed, includes: at a first node in a network (12), receiving at least a portion of a data feed including a plurality of data units; at a second node in the network, receiving at least a portion of the data feed; identifying an interruption in receiving the data feed at the first node; determining an extent of a data lacuna (504) extending between a last data unit received by the first node prior to the interruption and a first data unit received by the first node after the interruption; and sending (506) a request from the first node for results (510) saved by the second node, the results saved by the second node corresponding to the data lacuna.
