ABSTRACT

MODULAR ADAPTIVE HOLDER

The disclosure relates to adaptive holder for people with limited upper limb strength or mobility. The adaptive holder (22) having an opening (2, 3, 15) formed of a flexible material elastically deformable to frictionally hold a utensil at one side of the adaptive holder (22) and a connector (10) at another side of the adaptive holder (22) for connection to a support collar (12) and a locking arrangement (17, 18, 6, 11) for locking the connector (10) to the support collar(12), wherein the adaptive holder (22) is rotatable about at least one plane when it is connected to the support collar (12).
