ABSTRACT

There is provided a pricking device which makes possible to isolate a distal end portion of a pricking
5 element from its surrounding as much as possible while it is exposed from a lancet body, followed by taking out of an injector.

In a lancet assembly composed of a lancet 200 including a lancet body 204, a lancet cap 206 and a
10 pricking member 210 and a lancet case 100 that houses a portion of the lancet,

the lancet body has a protruding portion 212 and a stopper 213 located behind the protruding portion;

the lancet case includes an abutting portion 122 and
15 wings which extend backward and obliquely; and

when rear end portions 120 of the wings are fitted into sides of the case body 114, they are located along the sides of the case body.
