USE OF A GESTAGEN IN COMBINATION WITH AN ESTROGEN AND ONE OR MORE PHARMACEUTICALLY TOLERABLE EXCIPIENTS/CARRIERS FOR LACTOSE-FREE ORAL CONTRACEPTIVE

Abstract

A lactose-free oral contraception formulation comprising gestagens, preferably dienogest, chlormadione acetate, or levonorgestrel in combination with estrogens such as ethinylestradiol, 17β-estradiol, or estradiol valerate and one or more pharmaceutically tolerable excipients/carriers. Methods for making said formulation are also disclosed.
