TITLE:

TRANSPARENT DISPLAY AND SWITCHABLE 2D/3D TRANSPARENT DISPLAY

ABSTRACT

A transparent display including a plurality of pixels is provided. Each of the pixels includes a first substrate, a plurality of light-emitting elements, an optical layer, and an optical modulation layer. The light-emitting elements are disposed on the first substrate and located in an active luminous area of the pixel. The optical layer directly covers the light-emitting elements and a refractive index of the optical layer is greater than 1. The optical modulation layer is disposed on the optical layer. A switchable 2D/3D transparent display is also provided.
