【WHAT IS CLAIMED IS】

【Claim 1】

A butt wrapping paper comprising:

a body (11) having a planar shape approximately similar to the shape of a cigarette pack;

a flame-retardant coated surface (13) formed on the inside of the body (11), having a transverse length approximately similar to the circumferential length of a butt, and coated with a material having a heat resisting function;

an adhesive applied surface (12) onto which an adhesive has been applied, wherein the adhesive applied surface (12) is an area surrounding the outer circumferential surface of the flame-retardant coated surface (13); and

opening forming parts (15) formed in such a manner that the opposite side ends of the lower end of the body (11) are inwardly recessed and form an entrance, through which a butt can be input, when the opposite side ends are matched and ~~boned~~ bonded to each other,

the butt wrapping paper configured such that a plurality of the butt wrapping paper in an unfolded planar shape can be stacked with the adhesive applied surface (12) of one butt wrapping paper detachably attached to an outer surface of the body of another butt wrapping paper.

【Claim 2】

The butt wrapping paper as claimed in claim 1, wherein an upper end-first adhesive part (C) is formed on an upper end of the flame-retardant coated surface (13) so that when the butt wrapping paper is first bonded, the upper end-first adhesive part (C) is rolled up or bonded together so as to seal an upper end part of the flame-retardant coated surface (13).

【Claim 3】

The butt wrapping paper as claimed in claim 2, wherein a left first adhesive part (A) and a right first adhesive part (B) are formed around the flame-retardant coated surface (13) so that the left first adhesive part (A) and the right first adhesive part (B) are butted against and

bonded to each other so as to roll up the flame-retardant coated surface (13), thereby forming a space capable of receiving a cigarette butt therein.

【Claim 4】

The butt wrapping paper as claimed in claim 3, further comprising a sheet separation part (16) formed on an end of the body to allow the wrapping paper to be easily separated, wherein an adhesive has not been applied onto the sheet separation part (16).

【Claim 5】

The butt wrapping paper as claimed in claim 4, further comprising a finishing sleeve (14) which is formed on the side surface of one of the left first adhesive part (A) and the right first adhesive part (B) to be one vertical side end of the body (11), wherein when the finishing sleeve (14) is butted against and attached to the other end of the body, the finishing sleeve (14) is left, not bonded, so that the body is rolled up in a cylindrical shape.

【Claim 6】

The butt wrapping paper as claimed in claim 5, wherein a thermosensitive ink applied part (17) is formed on the outer surface of the body (11) and is changed in color when the embers of a butt come into contact therewith.

【Claim 7】

The butt wrapping paper as claimed in claim 6, wherein a seal-coated surface (18) is formed on an area enough to completely surround a butt while the seal-coated surface (18) entirely or partially overlaps the flame-retardant coated surface (13), so as to prevent air penetration and thus block an odor.

【Claim 8】

The butt wrapping paper as claimed in claim 7, wherein a guide line, which has been scored through scoring work of previously applying pressure along the line to be easily folded,

is formed on the boundary surface between the flame-retardant coated surface (13) and the finishing sleeve (14).

【Claim 9】

The butt wrapping paper as claimed in claim 8, wherein each center part of the upper and lower ends of the body (11) and one side surface of the flame-retardant coated surface (13) have been obliquely scored, and score-starting portions, which have been first scored, have been cut into the shape of a half-moon through Thomson work.

【Claim 10】

The butt wrapping paper as claimed in claim 9, wherein the outer surface of the butt wrapping paper has undergone a peeling process so that a plurality of butt wrapping papers in an unfolded planar state overlap one another to be stored.

【Claim 11】

The butt wrapping paper as claimed in one of claims 1 to 10, wherein a plurality of butt wrapping papers according to the present invention are butted against each other to form a larger reception space.

【Claim 12】

The butt wrapping paper as claimed in one of claims 1 to 10, wherein the flame-retardant coated surface (13) is coated with a flame-retardant coating material in one direction, and an attachment part (19) formed on an upper end of the body is also coated with a flame-retardant coating material in one direction, so that the attachment part (19) is detached and again attached to the flame-retardant coated surface (13) to be perpendicular to the coating direction of the coating material coated on the flame-retardant coated surface (13), thereby surrounding a portion, into which a cigarette butt is put, by flame-retardant coating.

【Claim 13】

The butt wrapping paper as claimed in claim ~~11~~12, wherein the attachment part (19) and the flame-retardant coated surface (13) have been scored in the same direction as that of the coating material coated thereon, so that in a case that a received butt has embers, final ignition occurs by a small amount of air, thereby consuming the whole amount of inner oxygen.

【Claim 14】

The butt wrapping paper as claimed in claim 11, wherein the butt wrapping paper in an unfolded planar shape is bonded to an object including a cigarette pack (or wallet and notebook) to be carried.
