ACTION

NEW HORMONE COMPOSITION AND ITS USE

THERAMEX Laboratory

SUMMARY OF THE TECHNICAL CONTENT OF THE INVENTION

The present invention relates to the field of therapeutic chemistry and more particularly to the field of pharmaceutical hormone technique.

More precisely, its objects are new pharmaceutical hormone compositions formed of an estrogen-progestin association consisting of an estrogen compound and a progestin compound, associated or mixed with one or more non-toxic, inert and pharmaceutically acceptable excipients suitable for oral administration.

The present invention also concerns the use of the estrogen-progestin mixture in which the estrogen compound and the progestin compound are administered in combination. The combined association may be prescribed continuously or intermittently, with a view to creating a composition designed to treat estrogen deficiencies and to prevent osteoporosis and cardiovascular disorders in menopausal women.

A further object of the invention is a process for the preparation of the said new pharmaceutical estrogen-progestin compositions.
