

BACCARAT GAME SYSTEM FOR FILTERING GAME AND GAME FILTERING METHOD THEREOF

Abstract

The present invention relates to a baccarat game system for
5 filtering game and a game filtering method thereof. The method
comprises the following steps: after at least one player respectively
selects any one of at least one filtering rule through a filtering
selection button, making a filter filters out a baccarat game
conforming to the filtering rule; making a display assembly
10 corresponding to the at least one player display a historical game
record of the baccarat game conforming to the filtering rule; after the
at least one player bets on the selected baccarat game through a
plurality of betting buttons; and after a new game result is generated,
making a payout processing unit compensate for the at least one
15 player. In this way, the at least one player can be assisted in betting;
and betting efficiency can be increased, thereby increasing the
turnover.
