SHARING OF ENCRYPTED DIGITAL CERTIFICATES VIA AUTO EXPIRABLE SMART CONTRACTS

ABSTRACT

In our solution we use certificates from digital verified certificates so it provides an automatic back verification of data if the original is issued on the same network. Club this with digital signatures and we get the perfect solution to our problem of sharing. The same is put in smart contracts which have auto expiry functionality. That is once the pre coded time is complete the smart contract no longer let's users read the data.
