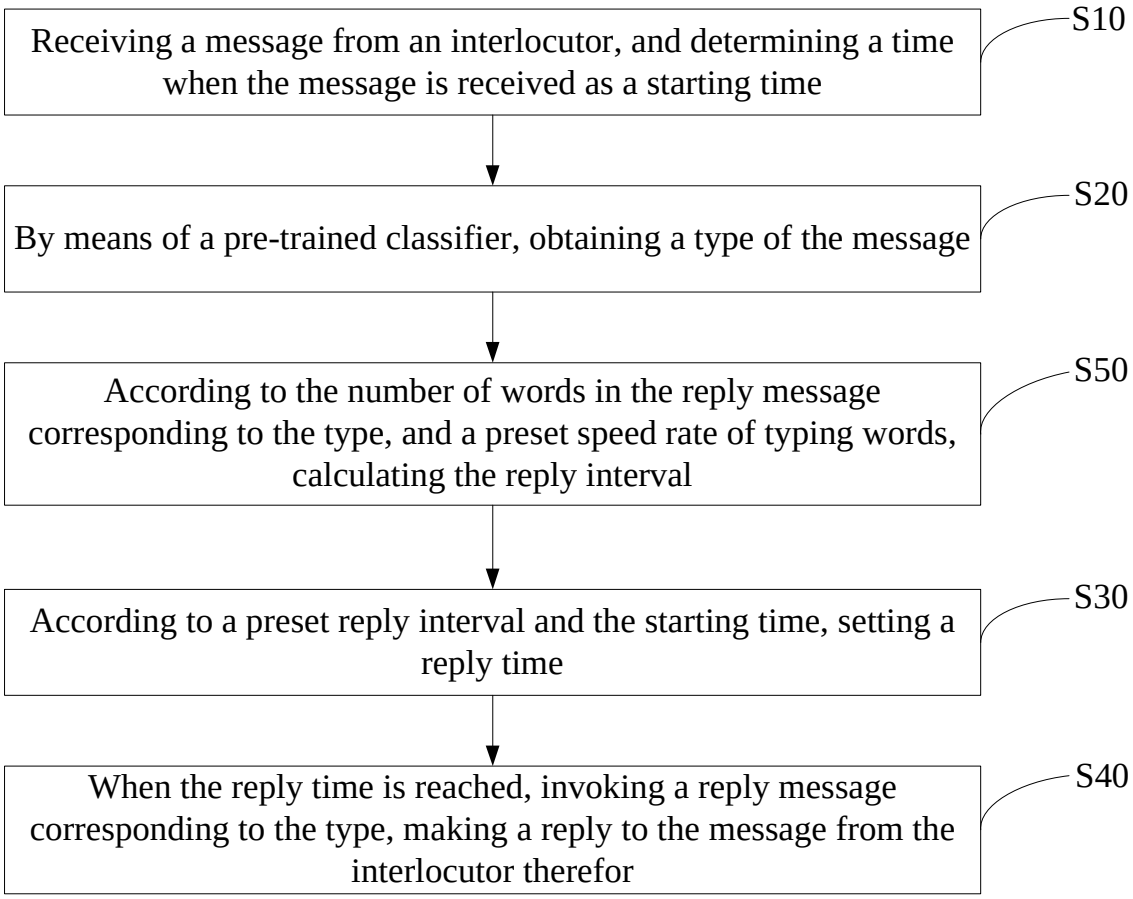
Receiving a message from an interlocutor, and determining a time when the message is received as a starting time
S10
By means of a pre-trained classifier, obtaining a type of the message
S20
According to a preset reply interval and the starting time, setting a reply time
S30
When the reply time is reached, invoking a reply message corresponding to the type, making a reply to the message from the interlocutor therefor
S40

FIG. 1



Receiving a message from an interlocutor, and determining a time when the message is received as a starting time
S10
By means of a pre-trained classifier, obtaining a type of the message
S20
According to the number of words in the reply message corresponding to the type, and a preset speed rate of typing words, calculating the reply interval
S50
According to a preset reply interval and the starting time, setting a reply time
S30
When the reply time is reached, invoking a reply message corresponding to the type, making a reply to the message from the interlocutor therefor
S40
