ABSTRACT OF THE DISCLOSURE

This Levitation and Propulsion Unit – Four (LPU-4) is a thrust generating invention in the field of inertia propulsion. This LPU-4 propulsion technology generates internal thrust by impulse drive to create resultant motion, with no external moving parts or mass ejection. This inertia thrust generating invention, Levitation and Propulsion Unit - Four (LPU-4), is an improved design of patent granted invention - Levitation and Propulsion Unit (LPU). This new version, LPU-4, incorporates new features of electromagnet into the design of patent granted LPU invention to enable higher and faster efficient resultant force generation.
