ABSTRACT

The invention concerns a system for the statistical distribution of prizes or winnings by means of chip cards (C1, .. Cj).

In order to simplify the management of a statistical distribution of prizes or winnings over all the members of a group of people whether or not benefiting from a service, the invention proposes to use chip cards and associated readers in order to distribute the management means contributing to this distribution over all the chip cards of the said members or over the readers and the chip cards.

The invention applies to the management of the rate of redistribution of the winnings in the case of a gaming system.
