ABSTRACT

By determining the total tying amount of the hair to be short hair 3 and long hair 4 to a wig base 2 to a pre-determined density, and further determining the tying ratio of short and long hairs 3 and 4 to the pre-determined ratio, after tying long hair to be short hair first to a wig base 2 in said pre-determined ratio, and cutting to a pre-determined length to make short hair 3, and next tying long hair to be long hair 4 among the tied short hair 3, and cutting to a pre-determined length to make long hair 4, short and long hairs 3 and 4 can be tied in the pre-determined hair amount, and moreover, short and long hairs 3 and 4 can be tied by controlling to the pre-determined mixing ratio, thereby a wig of a rich bulkiness owing to standing of long hair 4 supported by short hair 3 can be obtained.
