LIQUID MATERIAL VAPORIZING DEVICE

ABSTRACT

The present invention vaporizes a liquid material while preventing metal elution, and includes a main body block having a mixing portion that mixes a liquid material and a carrier gas, a liquid material supply pipe that supplies the liquid material to the main body block, a gas-liquid mixture lead-out pipe that leads out the gas-liquid mixture from the main body block, and a heating unit that heats the gas-liquid mixture lead-out pipe, in which the main body block is formed of ceramics or plastic, the liquid material supply pipe is formed of ceramics or plastic, and the gas-liquid mixture lead-out pipe is formed of ceramics.
