Abstract

A portable electronic music score device with support of page turning mechanisms. The device include an A4 or similar size of display for exactly presenting electronic content of textual, graphic and/or professional annotations related to the music materials. The device also includes auto or manual page turning mechanisms by embedded control items or external wire-based or wireless-based devices to meet different requirements in different use scenarios. Also, the device can link to Internet-based cloud music score services to facilitate user to browse, purchase and download desired electronic music materials. Meanwhile, the device can accept user input from embedded items, the display screen and even the external devices to perform annotations on the content that is shown in the display as reminders, comments or similar content for further sharing.

The above-mentioned portable electronic music score device will be described in 7 pages of total 10 drawings with detailed descriptions.
