Foot Support (iGem)

ABSTRACT

The present invention relates to inventing a jewellery housing to enclose any types of jewellery chain around a supporting feet structure for use as a foot rest under any electrical and electronic appliances and devices.

One jewellery foot assembly consisting of one jewellery housing assembly unit, one base foot support, and one top attachment. The jewellery housing assembly unit holds the jewellery chain around the outer circumference of the jewellery housing and the jewellery is visible looking from the outside at the jewellery housing assembly.

The top of the jewellery housing is covered with a top attachment. The bottom of the jewellery housing is fitted with a base foot support.
