What is Claimed is:

1. A game machine, comprising:

an input interface;

a game result generating unit;

a display unit; and

a control unit, connected to the input interface, the game result generating unit and the display unit, the control unit selectively further connected to a reward unit, the reward unit comprising a plurality of prizes, the control unit executing a plurality of commands of a slot game to control the game machine to perform following steps:

providing a plurality of bet options via the input interface;

detecting a bet signal generated by the input interface via the control unit, wherein the bet signal is associated with a player's selection of the plurality of bet options, each of the plurality of bet options is respectively associated with a bet value of different level, and betting on the different bet options causes the different prizes or different quantities of the prizes to be enabled among the plurality of prizes;

generating a game result via the game result generating unit, and generating a game screen corresponding to the game result, the game screen including a plurality of rollers and a plurality of game symbols, the plurality of game symbols arranged in an array on the plurality of rollers;

presenting the game screen via the display unit; and

determining whether to provide at least one prize of the at least one enabled prize as a rewarded prize for the player via the reward unit by the control unit when the control unit is connected to the reward unit, so

5

that at least a portion of a payout result paid to the player is associated with the rewarded prize, the game result and the bet signal, wherein the plurality of prizes are associated with the plurality of bet options.

2. The game machine as claimed in claim 1, wherein the game result corresponds to the bet signal.

3. The game machine as claimed in claim 2, wherein each of the different bet options betted corresponds to different quantities of the rollers or the different rollers among the plurality of rollers.

4. The game machine as claimed in any one of claims 1 to 3, wherein the slot game further includes one or more special symbols, and the control unit further controls the game machine to perform following steps:

determining whether the one or more special symbols appearing on the rollers in the game result; and

when the one or more special symbols appearing on the rollers, adjusting the payout result according to the one or more special symbols appearing on the plurality of rollers.

5. The game machine as claimed in claim 4, wherein when the one or more special symbols appear on the plurality of rollers, the control unit further determines whether the rewarded prize is provided via

the reward unit.

6. The game machine as claimed in claim 4, wherein the special symbol and the game symbol are presented on at least one position of one of the plurality of rollers.

7. The game machine as claimed in claim 4, wherein when the slot game comprises more than one special symbols, the different bet options correspond to different quantities or types of the at least one special symbol.

8. The game machine as claimed in claim 3, wherein the slot game further comprises at least one special symbol, and the control unit further performs following steps:

determining whether the at least one special symbol appearing on the at least one roller corresponding to the bet signal in the game result; and

adjusting the payout result according to the at least one special symbol appearing on the at least one roller corresponding to the bet signal.

9. The game machine as claimed in claim 8, wherein the special symbol and the game symbol are presented at one position of the at least one roller.

10. The game machine as claimed in claim 9, wherein the different bet options correspond to different quantities or types of the special symbol.

11. The game machine as claimed in any one of claims 1 to 3, wherein the slot game further comprises one or more additional prize symbols

and one or more additional prize rollers, and the control unit further performs following steps:

determining whether at least one additional prize symbol of the one or more additional prize symbols appearing on the one or more additional prize rollers in the game result; and

adjusting the payout result according to the at least one additional prize symbols appearing on the at least one of the additional prize rollers.

12. The game machine as claimed in claim 11, wherein the different bet options correspond to different quantities of the additional prize rollers or the different additional prize rollers, or correspond to different quantities or types of the additional prize symbols.

13. The game machine as claimed in claim 3, wherein the slot game further comprises more game symbols, the different bet options are respectively associated with at least one of the game symbols, the control unit further enables or upgrades the associated at least one game symbol according to the bet signal, and the enabled or upgraded at least one game symbol appears only on the at least one roller corresponding to the bet signal.

14. The game machine as claimed in claim 1, wherein the plurality of bet options include a mandatory bet option and at least one optional bet option.

15. The game machine as claimed in claim 1, wherein the plurality of bet options include a first mandatory bet option and a second mandatory bet option.

16. A game system, comprising:

a game result generating unit;

a bet unit;

a reward unit, comprising a plurality of prizes; and

a control unit, connected to the game result generating unit, the bet unit and the reward unit, the control unit further connected to an electronic device of a player, wherein the electronic device includes a display screen and an input interface, the control unit executes a plurality of commands of a slot game to control the game system to perform following steps:

providing a plurality of bet options by the input interface via the bet unit, each of the plurality of bet options respectively associated with a bet value of different level or different quantities of the plurality of prizes;

receiving a bet signal generated by the input interface via the control unit, the bet signal associated with the player's selection of the plurality of bet options;

randomly generating a game result and generating a game screen corresponding to the game result by the game result generating unit, the game screen including a plurality of rollers and a plurality of game symbols, the game symbols arranged in an array on the rollers;

transmitting the game screen to the display screen for display; and

determining by the control unit whether randomly providing

at least one prize of the at least one enabled prize as a rewarded prize for the player via the reward unit, so that at least a portion of a payout result paid to the player being associated with the rewarded prize, the game result and the bet signal.

17. A game system, comprising:

at least one game machine as claimed in claim 1; and

a controller, connected to the at least one game machine to manage information provided by the at least one game machine.

18. An operation method of an electronic device, the electronic device being provided for a player to play a slot game, the operation method comprising:

providing a plurality of bet options by an input interface, the different bet options being respectively associated with a bet value of different level, the electronic device including a control unit, the input interface, a game result generating unit and a display unit;

detecting by the control unit whether the input interface generating a bet signal, and the bet signal being associated with the player's selection of the plurality of bet options;

generating a game result and a game screen corresponding to the game result by the game result generating unit, the game screen having a plurality of rollers and a plurality of game symbols, and the plurality of game symbols being arranged in an array on the plurality of rollers;

presenting the game screen by the display unit; and

when the control unit being connected to a reward unit

comprising a plurality of prizes, enabling different prizes of different quantities prizes among the plurality of prizes according to the plurality of bet options selected by the player, determining whether to provide at least one prize of the at least one enabled prizes as a rewarded prize for the player via the reward unit, so that at least a portion of a payout result paid to the player associated with the rewarded prize, the game result and the bet signal, wherein the one or more prizes are associated with the plurality of bet options.
