100
101: Adding a first neutralizing solution into a dispersion medium to form a first suspension
102: Adding a monomer from which structural unit (a) is derived into the first suspension to form a second suspension
103: Adding a monomer from which structural unit (b) is derived into the second suspension to form a third suspension
104: Adding a monomer from which structural unit (c) is derived into the third suspension to form a fourth suspension
105: Adding an initiator solution into the fourth suspension to form a fifth suspension
106: Adding a second neutralizing solution dropwise into the fifth suspension to form a sixth suspension
107: Filtering the sixth suspension to form a binder composition
