PEPTIDES USED IN ANTI-CANCER PHARMACEUTICAL COMPOSITION SCREENING METHOD AND THE APPLICATION THEREOF

ABSTRACT OF THE DISCLOSURE

The present invention provides polypeptides to detect the amount of ATP binding-cassette transporter antibody. Said polypeptide could be used in screening to get the samples abundant in anti-ATP binding-cassette transporter antibody, wherein said samples abundant in anti-ATP binding-cassette transporter antibody can be further used as anti-cancer pharmaceutical compositions to kill multi-drug resistance cancer cells.
