METHOD FOR RECOGNIZING FORGED DOCUMENT, DEVICE, AND STORAGE MEDIUM

ABSTRACT

Embodiments of this specification provide a method for recognizing a forged document, a device, and a storage medium. In the method, an electronic device can obtain a document category of a target document in response to a recognition request for the target document, and obtain check information corresponding to the document category; extract information from the target document to obtain content information of the target document; and then check the content information based on the check information, to determine whether the target document is a forged document.
