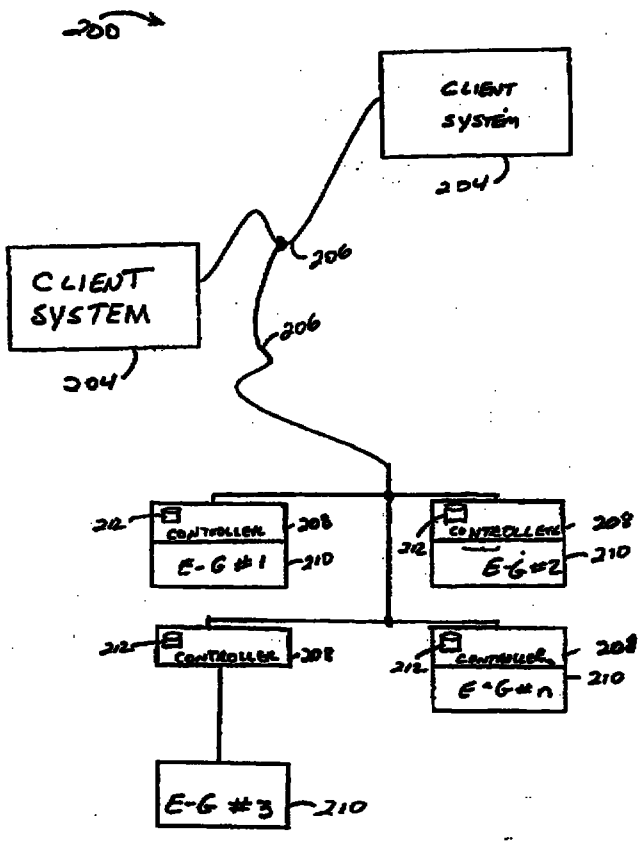
(54) Title: METHODS AND APPARATUS FOR WEB-ENABLED ENGINE-GENERATOR SYSTEMS



(57) Abstract: A controller (108) for controlling and monitoring the operation of an engine-generator (14) is disclosed. The controller includes a central processing unit (122), a power supply, an input/output system (126), a communication system (134), an annunciation system (130, 132) and mode control switches (158). The operational status of the engine-generator is displayed on a liquid crystal display (154) and logged in a data storage system or communicated to an external system using a communications interface. The controller also incorporates a monitoring system.
