ABSTRACT

The present disclosure relates to methods and apparatuses for managing visitor information, electronic devices and storage media. The method includes: receiving a follow-up request for a target visitor, wherein the target visitor is included in unfollowed-up visitors in a visitor list; obtaining accompanying persons of the target visitor from a server-side in response to the follow-up request; and establishing a visitor group including the target visitor based on the target visitor and the accompanying persons of the target visitor, to associate information of multiple visitors in the visitor group, and displaying the information of multiple visitors in the visitor group by a client.
