deterministic elements - tees, greens, fairways and hazards. The distinctive feature of the solution is that each one of the holes has several sets of tees located in different places and with different pars. Thus, the game from different tees introduces some variety, but in principle the route remains predetermined, i.e. the order of playing the holes and entering the greens is always the same. In addition, if each hole is provided with tee sets having pars from 3 to 5, then the area of the golf course and, as a consequence, the construction expenses significantly increase.

Embodiments of the invention seek to increase the number of golf course routes in the presence of the same set of elements thereon, and, ultimately, to increase the variability of the game.

An aspect of the present invention provides a golf course comprising a traditional number of holes containing a set of deterministic elements – tees, greens, fairways and hazards, characterized in that at least one tee is within the standard playing distance of at least two greens, thereby and due to location and shaping of other deterministic elements (as relevant) forming new holes that create new routes for playing the golf course, corresponding to all established standards of professional and non-professional (amateur) golf as a regulated sport, wherein the quantity of tees coincides with the quantity of greens.

Another aspect of the present invention provides a golf course comprising:

a set of deterministic elements comprising: a traditional number of tee areas, said traditional number of greens, fairways, and hazards, wherein at least one said tee area is within any of par 3, par 4, or par 5 playing distance of at least two said greens, the golf course further comprising:

a first pre-defined golf course route having a specific score card, the first pre-defined golf course route comprising a first set of said traditional number of playing zones, each playing zone of the first set comprising the following elements from the set of deterministic elements:

a tee area;

a green; and

optionally a fairway arranged between the tee area and the green;

a second pre-defined golf course route having a specific score card, the second pre-defined golf course route comprising a second set of said traditional number of playing zones, each playing zone of the second set comprising the following elements from the set of deterministic elements:

a tee area;

a green; and

optionally a fairway arranged between the tee area and the green;

wherein the first pre-defined golf course route is different from the second pre-defined golf course route,

wherein the deterministic elements comprising tee areas, greens, fairways, and hazards are the same for the first pre-defined golf course route and the second pre-defined golf course route.

The application task is achieved due to the fact that in a golf course on which there is a traditional number of holes containing a set of deterministic elements - tees, greens, fairways and hazards, at least one tee is within the standard playing distance of at least two greens, thereby forming new holes, creating new routes of playing the course, corresponding to all established game standards.

The technical result of the invention consists in the fact that in the presence of a traditional number of the same elements, it is possible to create different full-length routes on the golf course, which significantly increases the variability of the game and contributes to reducing the construction expenses.

In figures 1, 2, 3 of the drawings attached to the description schematic images of the same 18-hole golf course with a traditional set of the same elements with three routes laid thereon are given.

As an example of implementation of the invention, a designed and constructed golf course in the Vsevolozhsk District of the Leningrad Region, Russia was chosen. The basic game route is shown in figure 1, where positions 1, 2, 3 ... 18 represent the tee of the 18-hole course, and the corresponding greens are indicated by positions 1d, 2d, 3d ... 18d. Herewith, the numbering of tees and greens on the rest golf courses shown in the drawings (figure 2 and figure 3) corresponds to their numbering in figure 1. According to the distinctive part of the Claims, where it is stated that "at least one tee is within the standard playing distance at least up to two greens", in the claimed subject matter the number of such tees is more than one, and this allows to increase the number of game routes, in particular, up to three, which are shown in the drawings as solid bold lines indicating the number of the corresponding route as a figure enclosed in a circle. The principle of one tee, within the standard distance up to two greens, extends to all tees of the described golf course. This circumstance, in principle, allows to increase the number of routes more than

CLAIMS

1. A golf course comprising a traditional number of holes containing a set of deterministic elements – tees, greens, fairways and hazards, characterized in that at least one tee is within the standard playing distance of at least two greens, thereby and due to location and shaping of other deterministic elements (as relevant) forming new holes that create new routes for playing the golf course, corresponding to all established standards of professional and non-professional (amateur) golf as a regulated sport, wherein the quantity of tees coincides with the quantity of greens.

2. A golf course comprising:

a set of deterministic elements comprising: a traditional number of tee areas, said traditional number of greens, fairways, and hazards, wherein at least one said tee area is within any of par 3, par 4, or par 5 playing distance of at least two said greens, the golf course further comprising:

a first pre-defined golf course route having a specific score card, the first pre-defined golf course route comprising a first set of said traditional number of playing zones, each playing zone of the first set comprising the following elements from the set of deterministic elements:

a tee area;

a green; and

optionally a fairway arranged between the tee area and the green;

a second pre-defined golf course route having a specific score card, the second pre-defined golf course route comprising a second set of said traditional number of playing zones, each playing zone of the second set comprising the following elements from the set of deterministic elements:

a tee area;

a green; and

optionally a fairway arranged between the tee area and the green;

wherein the first pre-defined golf course route is different from the second pre-defined golf course route,

wherein the deterministic elements comprising tee areas, greens, fairways, and hazards are the same for the first pre-defined golf course route and the second pre-defined golf course route.

3. The golf course of claim 2, wherein the set of deterministic elements comprises eighteen tee areas and eighteen greens.

4. The golf course of any of claims 2 or 3, further comprising:

one or more further pre-defined golf course routes each having a specific score card, each said further pre-defined golf course route comprising the following elements from the set of deterministic elements:

a tee area;

a green; and

optionally a fairway arranged between the tee area and the green;

wherein each of the further pre-defined golf course routes is different from each of the remaining pre-defined golf course routes,

wherein the deterministic elements comprising tee areas, greens, fairways, and hazards are the same for each pre-defined golf course route.

5. The golf course of any of claims 2 to 4, further comprising a rough extending along at least a portion of an edge of each said fairway.

6. The golf course of any of claims 2 to 5, wherein the hazards are selected from a group consisting of a lake, a trap, a bunker, a tree, a bush, and a hill,

7. The golf course of any of claims 2 to 6, wherein a said hazard is positioned along each said fairway.
