ABSTRACT

SMART CHARGER FOR MOBILE PHONE

The Utility Model proposed herein refers to an accessory device for mobile phones, in particular smartphones, and is intended to ensure the use of the device in operation for an extended period, such that when the cell phone battery runs out, the user does not need an electrical network to charge the smartphone; he will only need to use his own charger to accomplished this task, and that will also guarantee at least two full charges for his device, with more freedom, flexibility and autonomy.
