ABSTRACT

[ABSTRACT]

[Problem] An object of the present invention is to further shorten a total time of a rice washing step and a rice cooking step in a rice washing and cooking machine.

[Solution] In a rice washing and cooking machine including: a single rice storage storing rice; a single rice washer washing the rice; and a plurality of rice cooking pots, in which the rice storage and the rice washer integrally move above the rice cooking pots and the rice and water are supplied from the rice washer to a predetermined rice cooking pot, a series of rice washing and cooking operation including a measuring step of supplying a measured amount of the rice to be cooked to the rice washer, a rice washing step of washing the rice by the rice washer, a soaking step after the rice washing step, a rice cooking step by the rice cooking pot, and a steaming step by the rice cooking pot after the rice cooking step is performed, and a normal continuous mode, in which the rice washing and cooking operation is continuously performed using a set number of the pots, or a time-saving continuous mode, in which the steaming step in the series of rice washing and cooking operation is omitted and the rice washing and cooking operation is continuously performed using a set number of the pots in a shorter cycle than that in the normal continuous mode, can be selected.
