

ABSTRACT OF THE DISCLOSURE (FIG. 2)

"PERPENDICULAR MAGNETIC RECORDING MEDIUM AND
A MAGNETIC REPRODUCING APPARATUS"

5

Disclosed is a magnetic recording medium having
a laminate structure comprising at least a substrate,
a Co alloy bias layer, a soft magnetic layer, and
a magnetic recording layer. The direction of residual
10 magnetization of the Co alloy bias layer faces one
direction of its radial direction. Also, the
perpendicular magnetic recording medium satisfies the
relationship given below:

$$15 \quad M_{s\text{soft}} \times (t_{\text{soft}} - 40 \text{ nm}) > M_{s\text{soft}} \times 40 \text{ nm} + \\ M_{s\text{bias}} \times t_{\text{bias}}$$

where, t_{bias} denotes the thickness of the cobalt
alloy bias layer, $M_{s\text{bias}}$ denotes the saturation
magnetization of the cobalt alloy bias layer, t_{soft}
denotes the thickness of the soft magnetic layer, which
20 falls within a range of between 40 nm and 200 nm, and
 $M_{s\text{soft}}$ denotes the saturation magnetization of the soft
magnetic layer.
