(54) Title: TECHNIQUES FOR ADJUSTING TRANSMIT POWER IN WIRELESS COMMUNICATIONS

(57) Abstract: Various aspects described herein relate to controlling transmit power in wireless communications. It can be determined, at a user equipment (UE), that communications with a base station are configured over a connection associated with a threshold reliability. Based at least in part on this determination, a configured transmit power can be adjusted to an adjusted transmit power for a transmission attempt over the connection. Data can then be transmitted at the adjusted transmit power.
