

ABSTRACT

The present invention provides a microorganism control agent that has excellent microorganism control performance, in particular, excellent antimicrobial performance, antialgal performance, and biofilm formation-inhibiting performance, and that also has suppressed metal elution, as well as a miticidal composition, an anti-mite member, and an anti-mite method that have excellent performance to suppress the infestation and growth of mites. The microorganism control agent according to the present invention contains platinum particles and particles of a metal other than platinum. The microorganism control agent may be such that platinum particles and metal particles are supported on a base material. The microorganism control agent has excellent antimicrobial performance and also has suppressed metal elution. The miticidal composition according to the present invention contains platinum particles and particles of a metal other than platinum. The miticidal composition has excellent performance to suppress the infestation and growth of mites.
