

FACE MASK FOR COMBINED USE WITH SANITARY MASK

ABSTRACT

An object is to provide a cosmetic face mask that produces a moisturizing effect as a measure against dry skin problems such as "mask irritation" while a sanitary mask is worn and that further does not bring a feeling of strangeness if worn when going out. As a solution, a face mask for combined use with a sanitary mask is provided. The face mask includes a cosmetic sheet in which a nonwoven fabric (A) and a resin film (B) are laminated with each other such that part of fibers constituting the nonwoven fabric (A) is included inside the resin film (B). The face mask has openings at least at positions where a nose, a mouth, and ears are located when worn.
