(54) Title: TRACKLESS VEHICLE AND SYSTEM FOR SYNCHRONOUS CONTROL OF TRACKLESS VEHICLE

FIG. 1

(57) Abstract: A system to transport a payload platform along a predefined path in an amusement facility, including a system controller to generate and transmit a timing signal and a propulsion platform, coupled to and supporting the payload platform, to traverse the predefined path in synchronism with the timing signal received from the system controller. The propulsion platform having an address corresponding to at least one of a plurality of individually addressed timing signals. The system may further include a plurality of entertainment devices positioned along the predefined path in an amusement facility, that likewise operate in synchronism with the timing signal received from the system controller.
