

CONTROL MARKER FOR IMPLEMENTING ANALYSIS METHODS ON SPOTS**Abstract**

The present invention relates to the use of a control marker for implementing analysis methods on spots, in particular in the context of multiplex analyses. The present invention thus relates to solid media containing said control marker, to the method for preparing same and to the use thereof in analysis methods. The present invention makes it possible to verify the presence, location and/or integrity of spots at the end of the analysis method, and thus to secure the results obtained, guaranteeing that the result produced is actually from a spot with presence, integrity and location.
