Abstract

A SPEAKER APPARATUS ASSOCIABLE WITH MULTIPLE MODES OF OPERATION

A speaker apparatus which can be associated with multiple operation modes and can be operated in at least one of the multiple operation modes. The aforementioned multiple operation modes can include a first operation mode, a second operation mode, a third operation mode and a fourth operation mode. The first operation mode can, for example, be a full mute mode. The second operation mode can, for example, be a megaphone mode. The third operation can, for example, be a teleconference mode. The fourth operation mode can, for example, be a surround detection mode.
